Assignment No : 05

Title:

Design and development of a dynamic **Travel Agency Web Application – "Destination Luxe"** using HTML, CSS, JavaScript, and Bootstrap.

Objectives:

1. To understand the complete process of designing and developing a real-world web application.
2. To implement an interactive and responsive travel website using modern frontend technologies.

Problem Statement:

To design and develop a dynamic **Travel Agency Website (Destination Luxe)** that allows users to:

- Explore premium travel destinations
- View curated travel packages
- Check pricing and trip details
- Book trips through a user-friendly form

The application must include **client-side validation using JavaScript** for booking forms to ensure proper user input.

Outcomes:

Students will be able:

1. To design a modern, visually appealing travel website UI.
2. To implement dynamic features like booking and form validation.
3. To integrate Bootstrap for responsiveness across devices.

Hardware and Software Requirements:

Hardware:

- Laptop/Desktop
- Minimum 4GB RAM

Software:

- VS Code / Notepad++
- Web Browser (Google Chrome)
- HTML5, CSS3, JavaScript
- Bootstrap CDN

Theory:

1) Introduction to JavaScript:

JavaScript is used in this project to create interactive features such as form validation, button actions, dynamic content display, and user interaction handling in the travel booking system.

2) JavaScript Concepts Used:

- **Data Types:** Used for storing user input (name, email, destination, etc.)
- **Functions:** Used for validating booking forms
- **Objects:** Used to manage travel package data
- **Events:** Click, submit, hover effects
- **Strings:** Used for handling user input and messages

3) Functions, Parameters & Invocation:

- Function is defined to validate form inputs
- Parameters include user details like name, email, travel date
- Functions are invoked on form submission
- call() and apply() concepts used for advanced handling

4) Detailed Website Description (IMPORTANT PART)

Homepage (Landing Section):

- Attractive hero section with travel-themed background
- Tagline like *"Explore the World in Luxury"*
- Call-to-action buttons like **Book Now / Explore Destinations**

Navigation Bar:

- Home
- Destinations
- Packages
- About Us
- Contact

Responsive navigation using Bootstrap.

Destinations Section:

Displays multiple travel destinations such as:

- Bali
- Maldives
- Switzerland
- Dubai
- Paris

Each destination includes:

- Image
- Short description
- Pricing
- Explore button

Travel Packages Section:

- Premium curated packages
- Includes trip duration, cost, and highlights
- Cards layout using Bootstrap
- Hover effects for better UI

Booking Form Section:

User can book a trip by filling:

- Name
- Email
- Phone Number
- Destination
- Travel Date

JavaScript Validation:

- Checks empty fields
- Validates email format
- Prevents submission if invalid
- Displays error messages

About Us Section:

- Information about Destination Luxe agency
- Focus on luxury travel experience
- Customer satisfaction and premium services

Contact Section:

- Contact form
- Email and phone details
- Social media links

Footer Section:

- Quick links
- Social icons
- Copyright information

Flowchart of Application:

Start

↓

Open Website

↓

Display Homepage (Hero Section + Navigation)

↓

User Browses Destinations & Packages

↓

User Clicks "Book Now"

↓

Fill Booking Form

↓

JavaScript Validation

↓

Valid → Submit Form

Invalid → Show Error

↓

End

DESIGN / EXECUTION STEPS:

1. Designed webpage structure using HTML.
2. Styled UI using CSS and Bootstrap.
3. Created responsive layout using Bootstrap grid system.
4. Implemented JavaScript for form validation.
5. Integrated all files (HTML, CSS, JS).
6. Tested website in browser.

TEST CASES:

Test Case	**Input**	**Expected Result**
Valid Booking	All correct details	Form submitted
Empty Fields	No input	Error message
Invalid Email	wrong@email	Validation error
Navigation Click	Click menu	Page scrolls correctly
Button Click	Book Now	Opens form

Conclusion:

The **Destination Luxe travel website** was successfully developed with a modern UI and interactive features. The project demonstrates real-world web development skills including responsive design, user interaction, and client-side validation using JavaScript.
