Assignment No : 07

Title:

Design and development of a dynamic **Student Feedback Web Application (EduFeedback System)** using HTML, CSS, JavaScript, and Bootstrap.

Objectives:

1. To understand the process of developing a real-time web application for student feedback systems.
2. To implement an interactive and responsive feedback platform using HTML, CSS, JavaScript, and Bootstrap.

Problem Statement:

To design and develop a dynamic **Student Feedback System (EduFeedback Student Platform)** where students can:

- Submit feedback about teachers/courses
- Rate different aspects like teaching quality, content delivery, and experience
- Provide suggestions and comments

The system must include **JavaScript validation** to ensure all required fields are correctly filled before submission.

Outcomes:

Students will be able:

1. To design a clean and user-friendly feedback interface.
2. To implement form validation using JavaScript.
3. To develop a responsive web application using Bootstrap.

Hardware and Software Requirements:

Hardware:

- Laptop/Desktop
- Minimum 4GB RAM

Software:

- VS Code / Notepad++
- Web Browser (Chrome/Edge)
- HTML5, CSS3, JavaScript
- Bootstrap CDN

Theory

1) Introduction to JavaScript:

JavaScript is used in this project to handle dynamic behavior such as validating feedback forms, capturing user inputs, and improving interactivity of the EduFeedback system.

2) JavaScript Concepts Used:

- **Data Types:** String, Number, Boolean (for storing feedback data)
- **Functions:** Used to validate and process feedback forms
- **Objects:** Represent structured feedback information
- **Events:** Submit, click, change events for form handling
- **Strings:** Used for handling user input and messages

3) Functions, Parameters & Invocation:

- Functions are defined to validate feedback form inputs
- Parameters include student name, subject, ratings, comments
- Functions are invoked when the form is submitted
- call() and apply() methods used for function execution

4) Detailed Website Description (EduFeedback System)

Homepage (Landing Page):

- Clean and modern UI focused on students
- Heading like *"Student Feedback System"*
- Simple navigation to submit feedback

Navigation Bar:

- Home

- Submit Feedback
- About
- Contact

Responsive design implemented using Bootstrap.

Feedback Form Section:

Main feature of the website where students provide feedback:

Fields included:

- Student Name
- Subject / Course Name
- Teacher Name
- Ratings (1–5 scale)
- Comments / Suggestions

Rating System:

- Interactive rating system (stars or dropdown)
- Evaluates:
    - Teaching Quality
    - Course Content
    - Communication

JavaScript Validation:

- Ensures all required fields are filled
- Validates input formats
- Prevents empty submissions
- Displays error messages for invalid input

About Section:

- Explains purpose of feedback system
- Highlights importance of student opinions

Contact Section:

- Contact form or details
- Used for queries and support

Footer Section:

- Quick navigation links
- Copyright information

Flowchart of Application:

Start

↓

Open Website

↓

Display Homepage

↓

User navigates to Feedback Form

↓

Fill Feedback Details

↓

JavaScript Validation

↓

If Valid → Submit Feedback

Else → Show Error

↓

End

DESIGN / EXECUTION STEPS:

1. Created HTML structure for feedback form and pages.
2. Designed UI using CSS and Bootstrap for responsiveness.
3. Implemented JavaScript for form validation.
4. Linked CSS and JS files with HTML.

5. Tested the application in browser.

TEST CASES:

Test Case	Input	Expected Output
Valid Feedback	All fields filled correctly	Form submitted
Empty Fields	Blank input	Error message
Invalid Input	Incorrect data	Validation error
Rating Selection	Select rating	Accepted
Submit Button	Click submit	Feedback processed

Conclusion:

The **EduFeedback Student Web Application** was successfully developed to collect and manage student feedback. The project demonstrates practical implementation of form validation, user interaction, and responsive design using modern web technologies.
